Pre-production **demo**

We protect our customers from time and many costs that may occur, by preparing the demo of the order received very quickly in order for the production to be concluded in a healthy way.

graphic **design**

We offer fast solutions by adhering to the wishes and corporate identities of our customers.

Laboratory

Weight Test

It is the test in which the weight of 1 m² corrugated cardboard is calculated after the sample sections taken from the plates are separated.

Thickness Test

It is the measure of the distance between the bottom and top layers of corrugated cardboard. The control of the thickness value of the treated plate is an important factor in controlling whether the process is applied correctly.

BTS

(Bursting Test)

With the BTS test, we aim to determine the maximum pressure value that paper, cardboard and corrugated cardboard can withstand without bursting under hydraulic pressure.

It shows the explosion resistance against internal forces in case the box falls. Its unit is kPa.

BCT

(Box collapse strength test)

The resistance of corrugated boxes to compression is determined. It is a test that determines the amount of load that the lowest box can carry when stacked with corrugated cardboard, with a special production BCT device made in accordance with FEFCO standards.

products

Food and Pizza Boxes

We produce different sizes and models for Food and Pizza boxes, suitable for use in the food industry, takeaway and restaurants, with designs that will bring your brand to the fore.

We produce moisture and oil resistant packages with special papers that meet your needs.
